

Thermador

BUILT-IN COFFEE MACHINE

Legacy

In **2018** Thermador added WiFi connectivity via Home Connect™ — expanding the beverage options and convenience.

In **2018** Thermador introduced a direct plumbed unit with an industry first drain connection.

Non-Plumbed

- Water tank offers an 80 oz capacity — enough for 10 cups of coffee or numerous espressos.
- Notifications alert the customer when water is running low and drip tray is full.
- Think outside the kitchen and install it anywhere — *Master bedroom? Home office?* The possibilities are endless!

Plumbed

- Added convenience with direct water supply and — *an industry first* — drain connection!
- Offers protection with our exclusive AquaStop® Plus technology.
- Reduces manual maintenance steps like refilling the water tank or emptying the drip tray.

Both versions share the same performance & convenience features, and are equipped with the ***Thermador Connected Experience*** powered by Home Connect™

Coffee Machine

PERFORMANCE

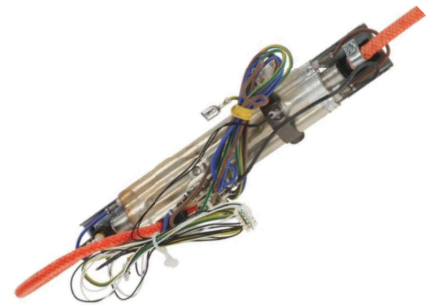

Grinding System

- High performance **ceramic disks** are precise, harder than steel, and quieter than stainless steel versions
- Adjustable grind settings —from very fine to coarse

Brewing System

- **Senso Flow** Heating System provides the most consistent water temperatures for richer flavors and only activates when needed
- **AromaPro** provides a constant 19 bar of pressure on the packed coffee grinds for the best flavor extraction

Variable Settings

- *Strength* — from mild to a true double shot that grinds and brews twice to reduce bitterness
- *Size* — adjust by ounces to perfectly fill any mug
- *Temperature* — from normal to very high

Interior Design

Water Reservoir

Holds 80oz (10 cups) of water and has a lid to minimize splashing — the plumbed unit has a direct water inlet!

Automatic Milk System

Insulated SS canister holds 17oz of milk and can steam/froth dairy or non-dairy options with ease

Whole Bean Hopper

Holds 1lb of beans and has a rubber seal for freshness

Ground Coffee Drawer

Use for a one-off brew of different coffee — like decaf, or oily beans that have already been ground

Coffee Machine

CONVENIENCE

Color TFT Display

- Intuitive and easy to read display illustrates beverage selection, including size, strength, and temperature control
- Easily navigate controls using up, down, left & right arrows to customize drinks

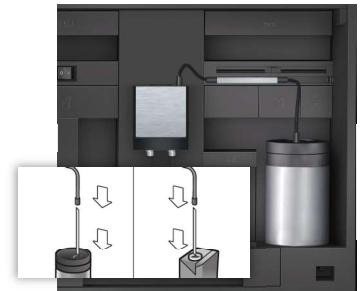

Beverage Selection

- 10 Pre-programed drink options —including hot water for tea
- Save 8 personalized **favorites** for quick access
- Brew 2 identical drinks at once with **double** button

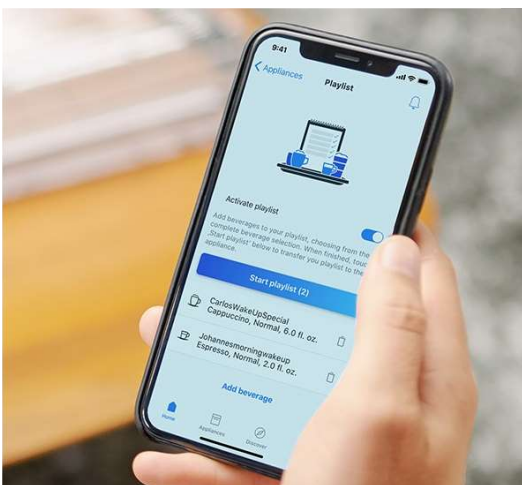

Automatic Milk System

- Steams & froths milk in just the right proportion for selected drink
- Insulated SS container holds 17oz and includes a FreshLock lid to easily return to the refrigerator for later
- Even use a Tetra Pak of soy or almond milk —just insert straw!

Home Connect™

CoffeeWorld

- Access this **expanded assortment** of coffee drinks from around the world, exclusively through the app

Playlist

- Create a list of up to **20 beverages** to brew consecutively
- Customize options from the standard selection or CoffeeWorld

Voice Control

- Use popular **voice assistants** like Amazon Alexa or Google Assistant to brew any drink

Coffee Machine

CARE & MAINTENANCE

Automatic Self-Rinsing

- System is rinsed **every time** the unit is switched On and Off
- A **burst of steam** clears the milk line before and after each milk drink is prepared — *confidently switch between dairy and non-dairy milk without manual cleaning*

Sensor Based Alerts

- Receive alerts on the display to **refill** the water & coffee beans, or to **empty** the drip trays & used grounds container
- Prompts to insert milk container if it's missing & required for selection, and to remove it when turning off the machine

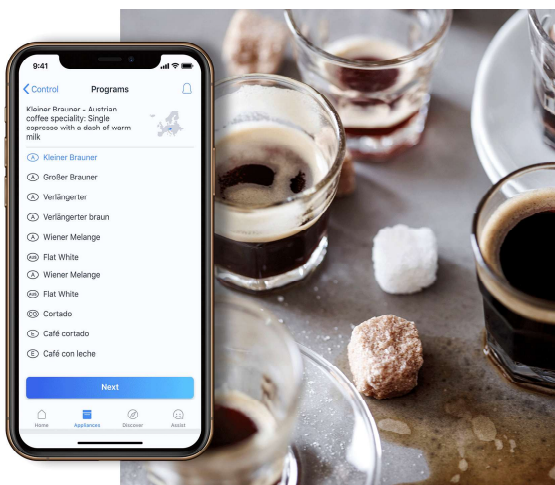

Cleaning Programs

- Cleaning, Descaling, and on-demand Milk System Rinse are accessible under the 'Clean' button
- Machine prompts when cleaning programs are required
- Display provides on-screen directions, like where to place cleaner

Home Connect™

Notifications

- Get in-app and/or push notifications straight to your phone

Check for Upcoming Maintenance

- Check '**Statistics**' in the appliance controls to see when the next cleaning programs will be needed

Software Updates

- Adding new features — *like new drinks in CoffeeWorld* — is as simple as a software update

Coffee Machine

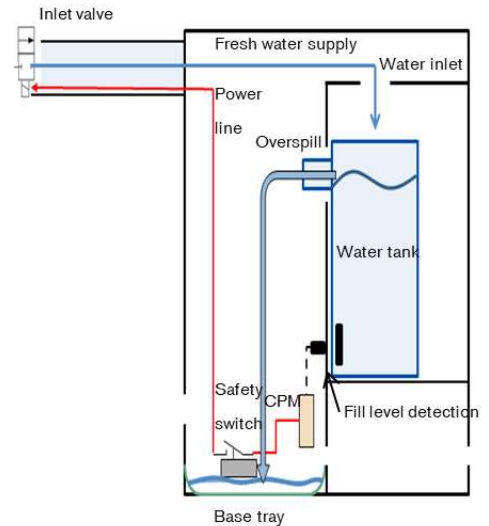

PLUMBED UNIT

- ★ Exclusive plumbed machine with water drain connection
- ★ Water replenishment program provides fresh water
- ★ Includes AquaStop® Plus Technology
- ★ Home Connect™ provides additional features (plumbed & tanked)

Plumbed System

- An electronic valve allows the fresh water to flow into the water tank
- Fill level of 30.5 oz is detected by a float in the water tank in combination with reed sensors
- In case of overflow, water will flow to overspill tray
- If excess water comes in contact with the safety switch, it will shut off and the water flow will stop

Drain System

- Water drains from the rear of the drip tray through the drain valve
- A pin presses a spring in the drip tray and the outlet valve is activated
- The strainer filter protects the drain system from coffee grinds
- Drain system works without a water pump, included installation instructions must be followed for proper performance
