Dishwashers

STAR DRY®

Available on Sapphire® & Star-Sapphire® dishwashers

Zeolite

- ★ Natural, porous mineral that can adsorb water vapor & humidity
- ★ BSH began using Zeolite in Europe in 2008
- ★ Exclusively in BSH dishwashers worldwide

Process 1: *Drying Phase*

1. Fan draws wet air into Zeolite chamber
2. Zeolite adsorbs water from the air, stores it, & releases heat
3. Hot, dry air is guided back into tub to dry dishes

Process 2: *Rejuvenation Phase*

1. During the prewash of next cycle, Zeolite is heated by an internal heater in chamber
2. Zeolite releases the stored moisture from previous drying phase
3. Hot, wet air is guided into the tub and heats the dishes
4. Dried Zeolite is recharged and ready for next drying phase
